

PRESS STATEMENT

7 August 2013

Following the fatal accident involving a Genie 135/70 at its Iver Depot on 5th June 2013, Kimberly Access Limited ("Kimberly") is continuing to investigate the circumstances surrounding the accident and is assisting the Health and Safety Executive (HSE) with their ongoing investigation.

Kimberly is concerned by the recent press statement released by Genie on Monday 29th July 2013. In this statement Genie state that it has found that some machines that were calibrated in the field may not have been calibrated according to Genie's service manual and therefore Genie recommends that the secondary boom angle range is checked on all machines as a precaution.

Kimberly wishes to make it clear that at no time has it ever attempted to calibrate the secondary boom angle range on the 135/70 involved in the accident and Kimberly's service records show that this procedure was only ever carried out by Genie personnel.

Kimberly's paramount concern remains ensuring the health and safety of its staff, customers and the public at large. Preliminary findings of appointed independent experts have raised concerns regarding the machine's integrity that are distinct and separate from the concerns raised by Genie in their press statement. Kimberly's remaining fleet of 25 no Z135's will therefore remain grounded until these concerns have been fully explored and until Kimberly is totally satisfied that the 135/70s are safe to operate or have been made safe by modification.

It would be inappropriate for Kimberly to comment further at this stage of the HSE's investigation.

Safety Notice

130005
EMEAR

Date: July 29, 2013
Model Affected: Z-135/70
Subject: Secondary Boom Angle Sensor Calibration
Allowable Hours: 60 minutes

Issue:

Genie has become aware of secondary boom angle sensor calibrations performed in the field in which the machine's service manual may not have been followed creating an improperly calibrated machine. **An improperly calibrated machine can lead to machine instability resulting in a machine tip over.**

Action Required:

This safety notice requires the immediate removal of all Genie Z-135/70 Boom lifts from service. Machines may only be returned to service after the inspection listed below is performed.

Tool required: Properly calibrated Digital level with magnetic base.

Inspection Procedure:

1. Locate and remove all of the machine models listed above from service.
2. Perform this procedure with the machine on a firm level surface, with the axles extended and the boom in the stowed position.
3. Locate the swing chassis.

Safety Notice

130005
EMEAR

4. Place the digital level on the swing chassis as shown below.

5. Set the digital level read out to zero.

Safety Notice

130005
EMEAR

6. Working on the same side of the machine, move the digital level from the swing chassis to the top of the secondary boom closest to the pivot end as shown below. Do not change the orientation of the digital level.

7. At the ground controls:
- Start the engine.
 - Fully raise the secondary boom  until any one of the inner boom sections just starts to extend.
 - Stop extending and turn the engine off.

Note: If the digital level times out before the secondary boom is fully raised, repeat the procedure from step 4.

8. Record the value displayed on the digital level in the attached “Completion Form”.
- ⊙ If the value is greater than or equal to (\geq) 75.5° , the machine is safe to use and can be returned to service. Finish filling out the “Completion Form” and return to Genie. No further action is required.
 - ⊗ If the value is less than ($<$) 75.5° , the machine must remain out of service. The secondary boom angle sensor will need to be calibrated. Continue on to step 9.

Safety Notice

130005
EMEAR

9. Calibrate the secondary angle sensor of the machine per the instructions in the machine's service manual (section 4-9). Record the desired digital level reading, greater than or equal to (\geq) 75.5 °, after calibration in the attached Completion Form.

Note: Do not perform this procedure unless you are trained and qualified to do so. To search for your nearest Terex AWP authorized dealer, click the link below:

<http://www.genielift.com/dealersearch>

10. Return the machine to service.
11. Finish filling out the "Completion Form" and return to Terex AWP Warranty Department. This will serve as verification that you have completed Safety Notice 130005.

Warranty:

The labor and travel distance required to perform this inspection and installation are covered under the provisions of our warranty agreement. Warranty claims can be submitted online, fax or e-mail. Please combine as many machines as possible on one claim form. If you need more information about filing a warranty claim, call Terex AWP warranty department.

If you are the owner of an affected machine and are not an authorized Terex AWP dealer, please contact your nearest Terex AWP dealer for assistance in completing this bulletin. Only Terex AWP Authorized Dealers will be reimbursed for labor or any other costs associated with this bulletin under the provisions of our standard warranty terms and conditions.

Local norms and regulations require that the seller of a Genie machine report to Genie the model and serial number of each machine sold, as well as the name, address, and telephone number of the new owner, within 60 days of the sale.

Safety Notice 130005

Completion Form

Your signature on this form will verify that you have performed Safety Notice 130005 and completed the necessary actions before returning the machine to service.

- ⊙ If the digital level reading is greater than or equal to (\geq) 75.5 °, the machine is safe to use and can be returned to service.
- ⊗ If the value is less than ($<$) 75.5 °, calibrate the secondary boom angle sensor before returning the machine to service. Refer to section 4-9 of the machine's service manual for the calibration procedure.

List the complete model and serial number (example: Z13505-146 or Z13507-556 or Z13512-1750)

Serial Number	1st digital level read-out	2 nd digital level read out after calibration is performed
